1. C program to find transpose of a 3*3 matrix:

```
#include <stdio.h>
void main()
    int A[3][3], B[3][3], row, col;
    printf("Enter elements in matrix of size 3x3: \n");
    for(row=0; row<3; row++)</pre>
        for(col=0; col<3; col++)</pre>
             scanf("%d", &A[row][col]);
    }
    // Compute matrix B: the transpose of matrix A
    for(row=0; row<3; row++)</pre>
        for(col=0; col<3; col++)
             //Store each row of A to each column of matrix B
             B[row][col] = A[col][row];
        }
    }
    // Prints the original matrix A
    printf("\nOriginal matrix: \n");
    for(row=0; row<3; row++)</pre>
        for(col=0; col<3; col++)</pre>
             printf("%d ", A[row][col]);
        printf("\n");
    }
    // Prints the transpose of matrix A
    printf("Transpose of matrix A: \n");
    for(row=0; row<3; row++)</pre>
        for(col=0; col<3; col++)
```

```
{
          printf("%d ", B[row][col]);
}
printf("\n");
}
```

Exercise:

- 1. Write C program to read a 3*5 matrix A from user and print the elements of the matrix n*A where n is a decimal number read from user.
- 2. Write C program to read a n*n matrix A from user (n is a user input) and print the (i) upper left, (ii) lower right, (iii) upper right, and (iv) lower left triangle, (v) diagonal and (vi) reverse diagonal of A.
- 3. Write C program to read a r*c matrix A from user (r, c are user inputs) and print the sum of even numbers in A.

Assignment:

1. Write a C program to find sum of border elements (bold ones) of a matrix Example:

If the array elements are:

1234

456**7**

7899

Output should be: Sum of main border elements = 54

because 1+2+3+4+7+9+9+8+7+4 = 54

- 2. Write C program to read two r*c matrices A and B from user (r, c are user inputs) and print the matrix 5A+7B+9 (add 9 with each element of the matrix 5A+7B to get the resultant matrix).
- 3. Write a C program to compute determinant of a 3X3 matrix

$$A = \begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix} \quad |A| = a(ei - fh) - b(di - fg) + c(dh - eg)$$

Determinant of 3x3 matrix
